

CLAIMS

1 1. A data checking system for determining if necessary files and data have been
2 entered into a computerized management system having a data base containing a plurality of
3 files and data, the system comprising:
4 an item list defining possible data in the computerized management system;
5 means for displaying the list and for enabling the user to select one or more items in
6 the item list as necessary for the management system;
7 means enabling a user to request a check of the selected items; and
8 means responsive to a request to check the selected items for conducting an
9 inspection of the management system data base to determine the presence of the selected
10 items and for reporting the results of the conducted inspection.

Sub A1
1 2. A data checking system as defined in claim 1 wherein the item list includes lesson
2 plan information and the inspection conducting means determines the present or absence of
3 lesson plans for a selected period in the management system data base.

1 3. A data checking system as defined in claim 1 wherein the item list includes child
2 developmental areas and the inspection conducting means determines the presence or absence
3 of child accomplishment in the selected developmental areas. report

1 4. A method of determining if necessary files and data have been entered into a
2 computerized management system having a data base containing a plurality of files and data,

3 the method comprising:
4 displaying an item list defining possible data in the computerized management system;
5 selecting one or more items in the displayed item list as necessary for the management
6 system;
7 requesting a check of the selected items;
8 checking the data base to determine the presence of the selected items; and
9 reporting the results of the checking of the data base.

1 5. A method as defined in claim 4 wherein the item list includes child developmental
2 areas and the checking determines the presence or absence of child accomplishment in the
3 selected developmental areas.

1 ~~Sub A2~~ 6. A method as defined in claim 4 wherein the item list includes lesson plan
2 information and the checking determines the present or absence of lesson plans for a selected
3 period in the management system data base.

~~add A3~~
